QUALITY

The plastics team at Martin Operating Partnership is guided by our core principles in everything we do, allowing us to provide premium plastic containers at a cost-efficient price point. Martin Lubricants is proud to announce it has received ISO 9001:2015 certification.

PRODUCTION

Martin Operating Partnership began manufacturing plastic bottles for lubricants packaging in 2012 with installation of two Uniloy blow molding machines that produced quarts, 1 gallon, and 5 quart bottles. In 2013, Martin Lubricants added four Husky injection molding machines to produce 5 gallon pails and lids. Expansion of the plastics facility continued in 2015 with the production of the 2 gallon bottle. We recently added small utility bottles in 2017 and 14oz grease cartridge in 2018 and continue to add new products.

CONTAINERS

With an expanded production capacity, Martin Lubricants offers plastic bottles and pails for direct sale to its customers. Bottle and pail production, inventory, and distribution takes place in our 70,000 sq. ft. plastics-only facility located in Smackover, Arkansas. Every member of the plastics team is committed to delivering quality plastics at an incredible value for our customers.

HIGHLIGHTS

- All primary inline colors available for production
- Custom colors available with minimum order
- Spouted and non-spouted lids
- All finished containers are palletized
- Decorating capabilities include offset printing up to six colors or heat transfer labeling and pressure sensitive
- Pails are 90 mil 20 liter/5 gallons

***Dunnage Program:** Some containers require the dunnage (pallets and top frames) to be returned to the Smackover AR facility. This can be arranged after a minimum accumulation of dunnage has been reached. If dunnage is not returned to the facility in a timely manner, customer assumes responsibility to provide payment for the dunnage materials. Martin will assume responsibility of freight on TL's of dunnage pick-ups to be returned.
